Overview

This assessment evaluates the public-facing web presence of Promelogic (www.primelogic.co.za), including potential cybersecurity risks associated with their operation.

Current Security Posture

Area	Observations
HTTPS / SSL	HTTPS is enforced across the website using valid SSL/TLS certificates, ensuring encrypted communication for data in transit, including contact forms and user interactions.
Privacy & Data Collection	A published privacy policy aligns with POPIA principles, outlining lawful data collection, user rights, and security controls, including password hashing and encrypted data handling.
Online Shop / Payments	The website does not operate a publicly visible online shop. Where e-commerce functionality is implemented for clients, payments are typically handled via third-party payment gateways; specific payment processors and PCI-DSS compliance details are not publicly disclosed on the site.
Website Maintenance	The website is actively maintained
Third-Party Integrations	The site utilises third-party services such as contact form handling, analytics, and potential marketing tools; specific details regarding supplier security assessments or formal vendor vetting are not publicly documented.

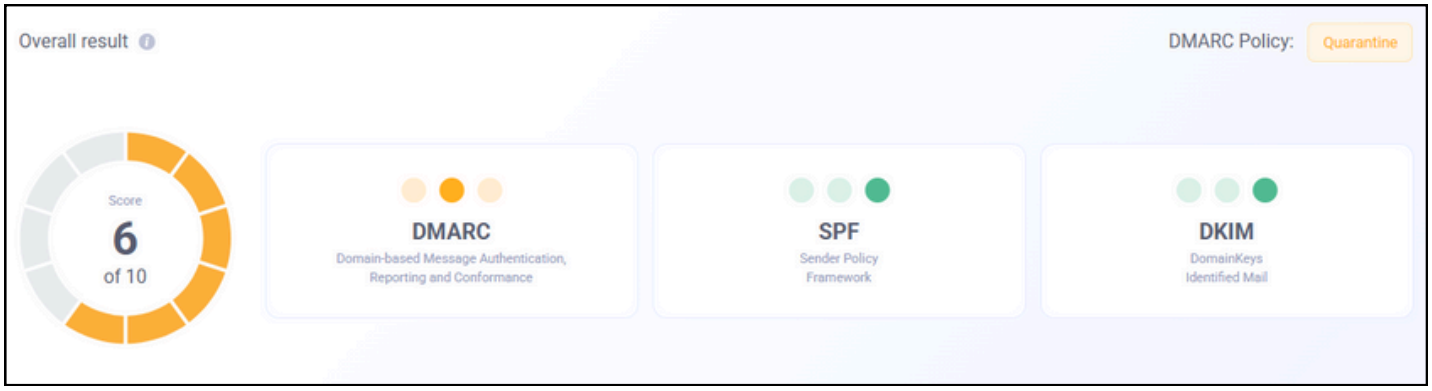
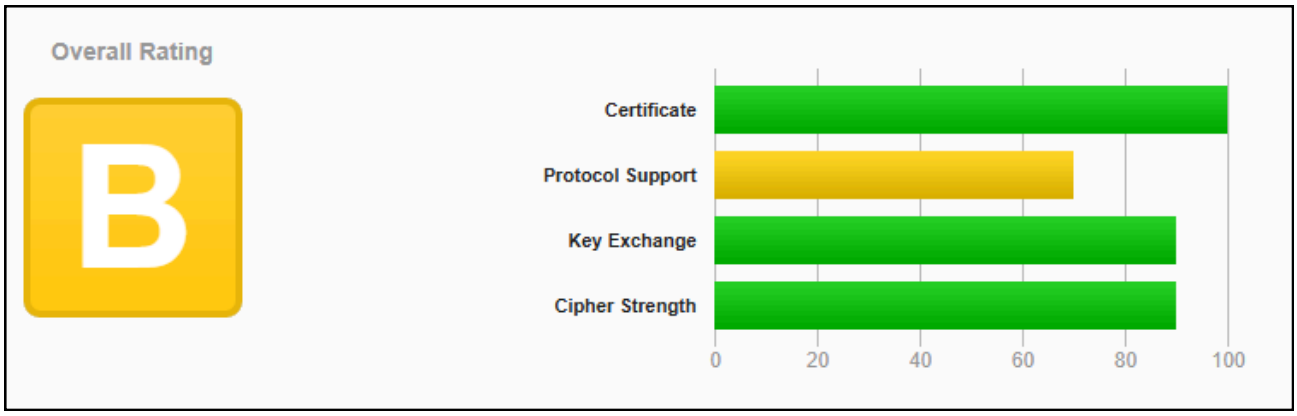
Domain Scan



Risk Assessment Level: Medium
A medium security risk level signals notable SPF, DKIM, and DMARC issues, posing a potential risk of email spoofing; prompt resolution is recommended to strengthen overall security.

SSL Certificate Report



- This server supports TLS 1.0 and TLS 1.1. Grade capped to B.
- This server does not support TLS 1.3.
- This site works only in browsers with SNI support.
- HTTP Strict Transport Security (HSTS) with long duration deployed on this server.
